

MariaDB TASK -12

1. Install MariaDB on your Linux system and verify the installation by running the command to check the MariaDB server version.

Ans :

- `sudo dnf install mariadb-server -y`
- `sudo systemctl start mariadb`
- `sudo systemctl enable mariadb`
- `mariadb --version`

2. Create a new MariaDB database named foodie_app and a table restaurants with columns id (INT, primary key), name (VARCHAR), cuisine (VARCHAR), and rating (FLOAT). Insert 3 sample restaurant records.

Ans :

- `sudo mariadb`
- `CREATE DATABASE foodie_app;`
- `USE foodie_app;`
- `CREATE TABLE restaurants (`
- `id INT PRIMARY KEY,`
- `name VARCHAR(100),`
- `cuisine VARCHAR(50),`
- `rating FLOAT`
- `);`
- `INSERT INTO restaurants (id, name, cuisine, rating)`
`VALUES`
- `(1, 'Spice Garden', 'Indian', 4.5),`
- `(2, 'Dragon Wok', 'Chinese', 4.2),`
- `(3, 'Pizza Palace', 'Italian', 4.7);`

- SELECT * FROM restaurants;
- 3. Write and execute a SQL query in MariaDB to find all restaurants in the foodie_app database with a rating greater than 4.0 and display their name and cuisine.**

Ans :

USE foodie_app;

SELECT name, cuisine

FROM restaurants

WHERE rating > 4.0;

- 4. Grant SELECT and INSERT permissions on the foodie_app database to a new MariaDB user named zomato_user with password zomato123, then test the permissions by connecting as that user and inserting a new restaurant.**

Ans :

- sudo mariadb
- CREATE USER 'zomato_user'@'localhost' IDENTIFIED BY 'zomato123';
- GRANT SELECT, INSERT ON foodie_app.* TO 'zomato_user'@'localhost';
- FLUSH PRIVILEGES;
- SHOW GRANTS FOR 'zomato_user'@'localhost';
- EXIT;
- mariadb -u zomato_user -p
- USE foodie_app;
- INSERT INTO restaurants (id, name, cuisine, rating)
- VALUES (4, 'Burger Hub', 'Fast Food', 4.3);

**5. Use ChatGPT or Copilot to generate a SQL query that updates the rating of all restaurants with cuisine 'Italian' to 4.5 in your MariaDB table, then run the query and verify the update.

Hint: Paste your prompt and the AI-generated query in your submission along with the result.**

Ans :

- UPDATE restaurants
- SET rating = 4.5
- WHERE cuisine = 'Italian';
- USE foodie_app;
- UPDATE restaurants
- SET rating = 4.5
- WHERE cuisine = 'Italian';
- Query OK, 1 row affected
- Rows matched: 1 Changed: 1 Warnings: 0
- SELECT id, name, cuisine, rating
- FROM restaurants
- WHERE cuisine = 'Italian';
