

Backup And Restore TASK – 8

- 1. Create a backup of your Music folder (or any folder with at least 3 files) using the tar command and compress it with gzip, saving the output as music_backup.tar.gz in your home directory.**

Ans : `tar -czvf ~/music_backup.tar.gz ~/Music`

- 2. Extract the contents of a tar.gz file (for example, music_backup.tar.gz) into a new directory called restored_music and verify that all files are restored correctly.**

Ans :

- `mkdir -p ~/restored_music`
- `tar -xzf ~/music_backup.tar.gz -C ~/restored_music`
- `find ~/restored_music -type f`
- `diff -r ~/Music ~/restored_music/home/$USER/Music`

- 3. Write a shell command that creates a compressed backup of all .jpg images from your Downloads folder into a file named images_backup.tar.gz, excluding any files larger than 5MB.

Hint: Use the find command with size filtering and tar with --files-from.**

Ans : `find ~/Downloads -type f -iname "*.jpg" -size -5M | tar -czvf ~/images_backup.tar.gz --files-from=-`

- 4. Simulate a restore scenario: delete one file from your original Music folder, then use your music_backup.tar.gz**

archive to restore only the deleted file without overwriting the rest.

Ans :

- `rm ~/Music/song.mp3`
- `tar -tzvf ~/music_backup.tar.gz`
- `tar -xzvf ~/music_backup.tar.gz`
`home/username/Music/song.mp3 -C ~/`
- `ls ~/Music`
